

ABSTRACT

An on-vehicle recording/reproduction apparatus of a data transmission/reception system includes an extraction unit which
5 compares a database file with a received database file and extracts information regarding audio data recorded in a home recording/reproduction apparatus but not recorded in the on-vehicle recording/reproduction apparatus, and a sending unit which sends the audio data that is recorded in the on-vehicle
10 recording/reproduction apparatus but not recorded in the home recording/reproduction apparatus and which is extracted by the extraction unit to the home recording/reproduction apparatus. The apparatus also includes a delete determination unit which determines whether to copy a song to the home
15 recording/reproduction apparatus or to delete the song from the recording unit of the on-vehicle recording/reproduction apparatus itself, by checking items "copy origin," "copy destination," and "priority level" in the database file.
